

March 2022 Release Notes

In addition to minor updates and bug fixes, significant updates from the March 2022 release will be highlighted below.

Bug Fixes

Improved Loading Time for Communities

After observing that communities were taking longer than expected to load, we significantly reduced the loading time for communities. This ensures our users can access what they need in a timely manner.

Navigation to Next Activity or Close Activity From To-Do List

Students may have noticed that when viewing activities through the To-Do List, the next button was not allowing them to advance to the next activity, or the next activity would show as a blank page. Also, when trying to close the activity, students may have noticed the activity not closing. These issues have been fixed, and now navigation within the To-Do List is functioning as expected.

Question Preview Showing Incorrectly After Editing a Question

Users may have noticed when a question is previewed after editing the question that the changes were not reflecting properly, but in the question edit and question search screens, it was showing correctly. This has been fixed, and now the question preview reflects the changes that were made when editing the question.

New Data Not Loading in Data Dashboard

FocalPoint has noticed an issue where the latest data is not loading in dashboards as quickly as expected. This has been fixed, and the newest data is loading in data dashboard quicker than before.

Start Learning Button Skipping Certain Activities

It was observed that the Start Learning button was not navigating correctly if the next activity was a certain activity type. This has been fixed, and the Start Learning button is advancing to the correct activity.
